

AMENDMENT TO THE CLAIMS

1. to 16. (Cancelled)

17. (Currently Amended) A wireless communication terminal according to claim 16, comprising:

first communication means for communicating with an entrance/exit regulating apparatus for regulating an entrance/exit of a person by a first wireless communication method;

second communication means for communication by a second wireless communication method; and

control means for restricting communication of said second communication means in accordance with an instruction from the entrance/exit regulating apparatus received by said first communication means;

wherein said second communication means can switch among a plurality of communication restriction modes, and said control means changes the communication restriction mode of said second communication means in accordance with a mode designated by the entrance/exit regulating apparatus, and

wherein when a person enters a predetermined area, if communication restriction of the mode designated by the entrance/exit regulating apparatus is more severe than communication restriction of a mode preset to said second communication mode, said control means changes a mode of said second communication means to the designated mode, whereas if not more severe, the mode is not changed.

18. (Currently Amended) A wireless communication terminal according to claim 17 [[16]], wherein the communication restriction modes include at least one of a non-restriction mode without communication restriction, a manner mode of automatically turning off incoming call sounds of real time communication, a drive mode of automatically responding to real time communication, a real time communication inhibition mode of permitting only non-real time communication, a call in-out restriction mode of inhibiting call in-out of all communications and a wireless signal transmission restriction mode of inhibiting transmission of a wireless communication signal.

19. to 21. (Cancelled)

22. (Currently Amended) A control method for a wireless communication terminal having a first communication unit for communicating with an entrance/exit regulating apparatus for regulating an entrance/exit of a person by a first wireless communication method and a second communication unit for communication by a second wireless communication method, the method comprising:

a reception step of receiving an instruction for restricting communication of the second communication unit from the entrance/exit regulating apparatus via the first communication unit; and

a control step of restricting communication of the second communication unit in accordance with the instruction received at said reception ~~step~~ step;

wherein said second communication unit can switch among a plurality of communication restriction modes, and said control step changes the communication

restriction mode of said second communication unit in accordance with a mode designated by the entrance/exit regulating apparatus, and

wherein when a person enters a predetermined area, if communication restriction of the mode designated by the entrance/exit regulating apparatus is more severe than communication restriction of a mode preset to said second communication mode, said control step changes a mode of said second communication unit to the designated mode, whereas if not more severe, the mode is not changed.
